

EVOBIOTECH

EvoBiotech is a biotech startup which comes from the University of Turin and has built a unique team of Scientific Advisors of experienced scientists.

The team is driven by the Emeritus Professor Giovanni Camussi and its expertise spans various therapeutic areas, from regenerative medicine to research of diagnostic markers, anti-tumoral therapy, basic and clinical research.

Thanks to our skills and the link with the university environment, EvoBiotech is able to provide highly specialized, avantgarde and targeted scientific services.

Our research team offers valuable support in various services

For investors, companies, law firms

Scientific project consultancy

- **Scientific asset** evaluation of companies, startups or academics
- Scientific evaluation of research projects
- Accurate **analysis and interpretation** of scientific data
- Scientific analysis for **due diligence**

Scientific writing consultancy

- Targeted **screening** of scientific literature and documentation
- Documentation analysis and production of a **strategic report**
- Consulting in the writing of scientific **protocols and procedures**
- Consulting in the writing of scientific and **educational articles** and reviews

Consultancy in the biological biotechnological pharmaceutical and life science fields

For companies and laboratories

Targeted scientific analysis

- Biological response to cellular stress
- **Gene expression** through real-time assays
- Quantification and size analysis of **nanoparticles** with Nanosight
- Cellular **engineering** with nucleic acids (miRNA/siRNA) with molecular and biological analysis
- **Protein expression**: quantification, qualitative and quantitative analysis with western blot
- Surface markers expression using **flow cytometry** technique
- **Biological activity** through in vitro assays: proliferation, vitality, angiogenesis, oxidative stress, migration, cytotoxicity

For specific and efficient analysis

Research and development

- Design and/or realization of complete **research projects** aimed at studying the therapeutic efficacy of a molecule and its characteristics

For a fast, external and objective confirmation of scientific data

EvoBiotech has already been chosen by:

Scientific consultancy for due diligence

Research project to study the therapeutic activity of extracellular vesicles (EVs) derived from stem cells on atopic dermatitis
